

Cimatron DieQuote

Cimatron DieQuote is a cloud-based software solution that generates accurate and comprehensive quotes, eliminating guesswork from stamping die cost estimation in as few as ten minutes.

Cimatron DieQuote

DieQuote uses intelligent algorithms and customizable design parameters to automate tedious manual calculations and laborious data entry.

Whether dealing with simple progressive dies or complex transfer dies, DieQuote empowers stamping die manufacturers with the data needed to make informed decisions for a competitive edge.

Comprehensive

Covers factors such as material costs, machining time, manufacturing processes, component complexity, labor rates, and overhead costs

Customizable

Generates quotes that reflect the unique characteristics of individual operations

Cost overviews

Provides a detailed overview of all cost components, helping to identify areas for optimization and negotiate with greater confidence

Identifying operations

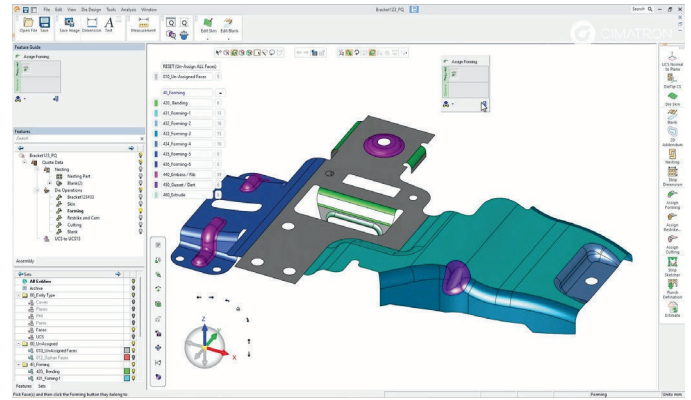

Identifies geometrical features for forming, flanging, piercing, trimming, and restriking operations

CAD integration

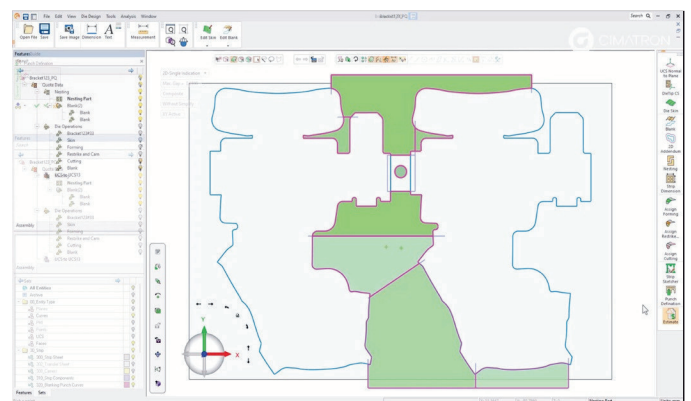

Interfaces easily with any CAD design software with direct data import and analysis

User-friendly interface

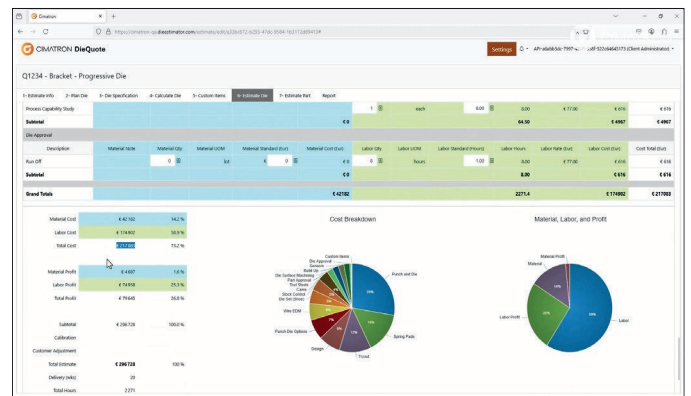

An intuitive interface makes it straightforward to learn with minimal training, enabling teams to quickly become proficient

DieQuote interfaces easily with any CAD design software with direct data import and analysis.

Intuitive and easy-to-use interface makes the software straightforward to learn.

Professional and customized quotations can be generated from the software in less than 10 minutes.
